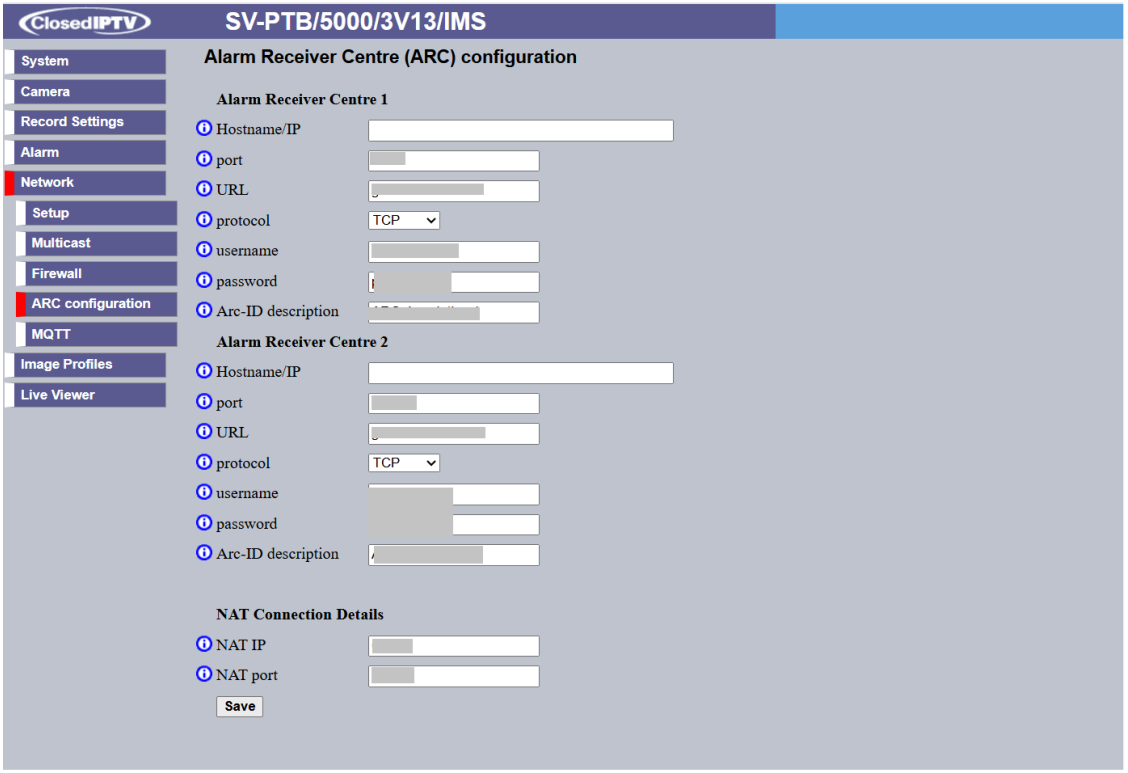
Netvu Integration

Client side settings:

1. Network Configuration

To allow the NetVu device to be discovered and accessed on a local or remote network:

- Assign a **static IP address** (recommended for reliable access).
- Configure:
  - **Subnet Mask**
  - **Default Gateway**
  - **DNS Servers** (if external access is needed)
- Ensure proper **port configuration**:
  - HTTP (default 80)
  - Control port (default 10001 or specific to your model)
  - Video ports for streaming
- Use **NetVu Discovery Tool** or **Web Admin** to detect and configure devices on the LAN.

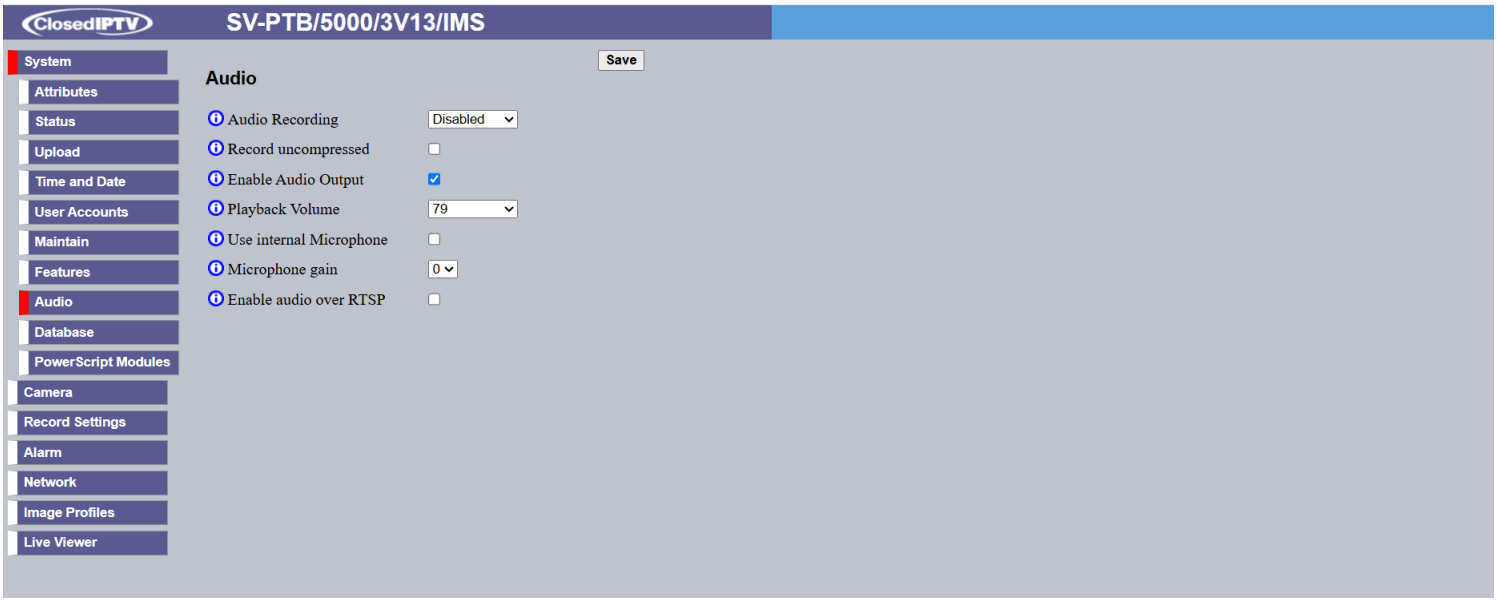


2.Time Configuration

Accurate time is critical for logging, playback, and event triggers:

- Set the **device's local time zone**.
- Configure **NTP server** (e.g., `time.windows.com` or a corporate server).
- Enable automatic time syncing with the NTP server.
- Ensure **synchronized time** with the viewing/recording platform (e.g., NetVu Observer).

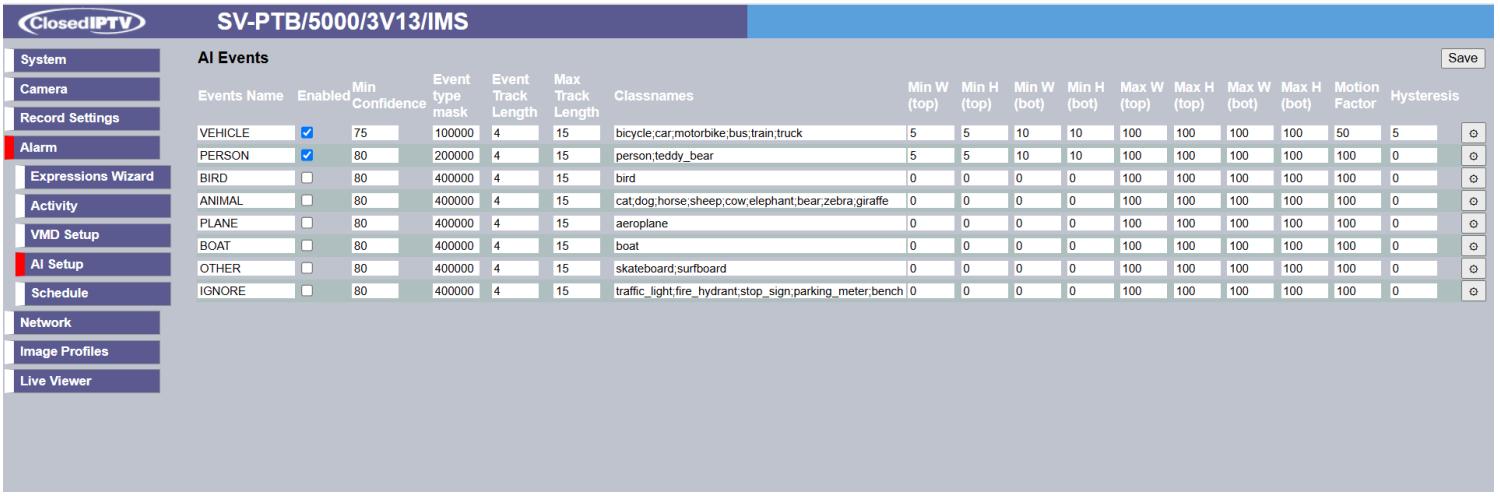
3.Audio:



4.Alarm/Event Configuration

To respond to events like motion detection, alarms, or external triggers:

- Enable **motion detection zones** and sensitivity settings through the device web UI or NetVu software.
- Set up **alarm inputs/outputs** for physical sensors or relays (if supported).
- Configure **event actions**, such as:
    - Email alerts
    - Alarm recording
    - Snapshot upload
    - Event tagging in recorded video
- Define **event rules** (e.g., record only on motion or during schedules).



Steps to configure on genesis:

Step 1: Login to genesis
Step 2: Navigate to configuration app
Step 3: Navigate to Site->Devices-> Add->Netvu
Step 4: Provide the mandatory details
Step 5: Click on dicover
Step 6: Click save
