Truvision configuration

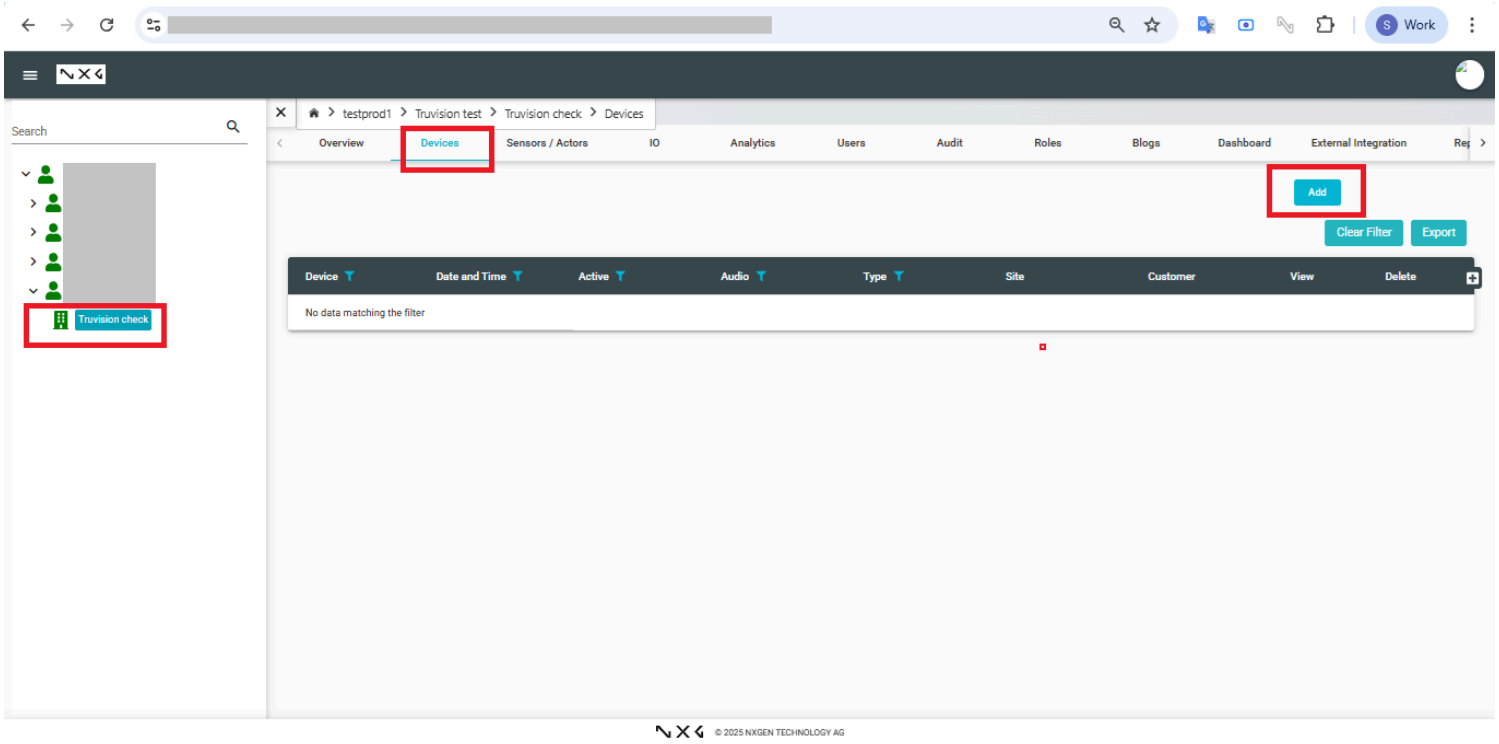
Overview:

TruVision is an OEM of Hikvision, the devices share underlying hardware/software compatibility. Therefore, **to add and receive motion/event alarms from a TruVision device**, the customer should:

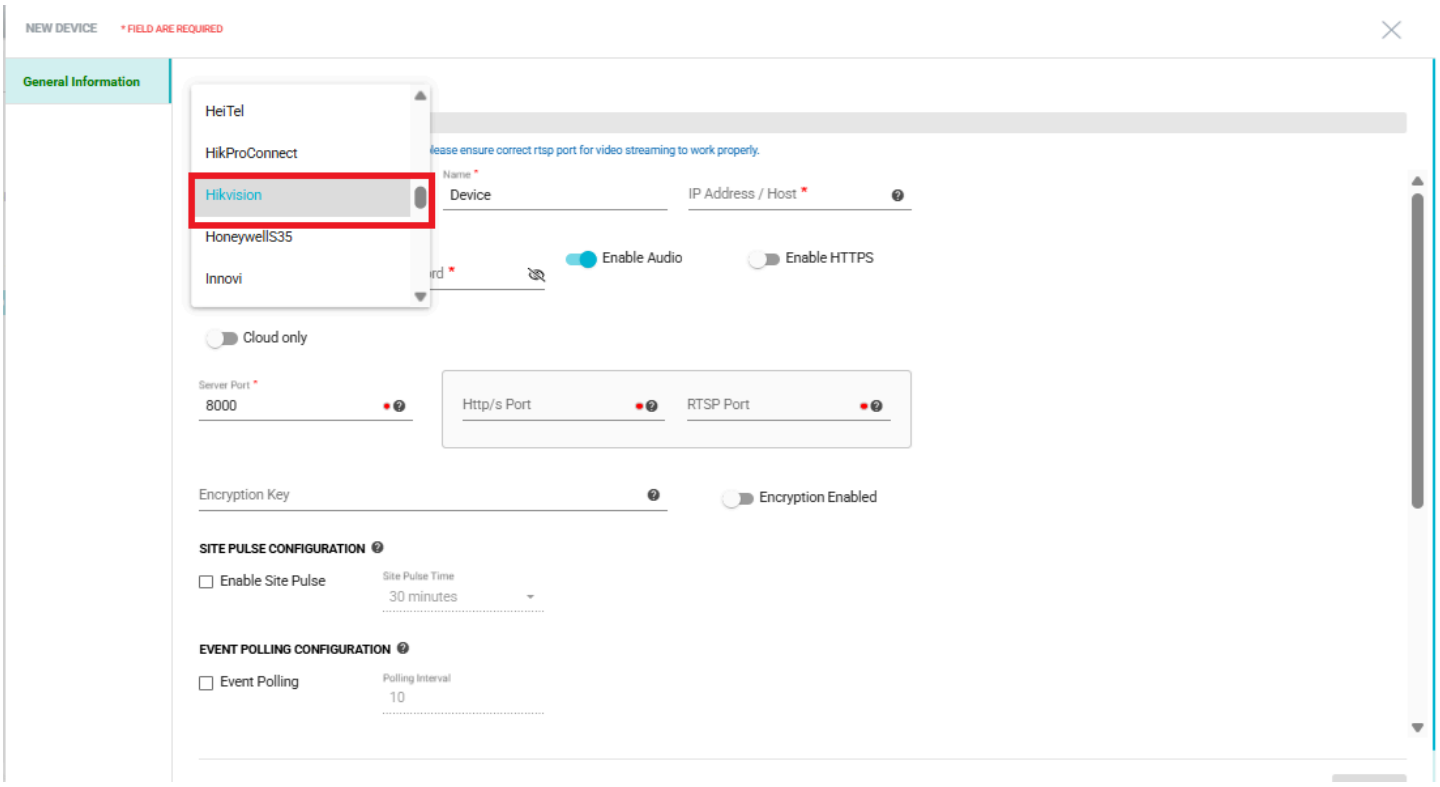
1. **Select “Hikvision” as the device type** in the genesis system.
2. **Enable event polling** for that device.

This ensures that motion detection and other alarms are correctly received and processed.

Steps to add a device into genesis:
Step 1: Login to genesis
Step 2: Navigate to configuration app
Step 3: Select the site from tree view
Step 4: Navigate to "Devices" tab at site level
Step 5: Click on "Add" button



Step 5: Select the device type as "Hikvision"

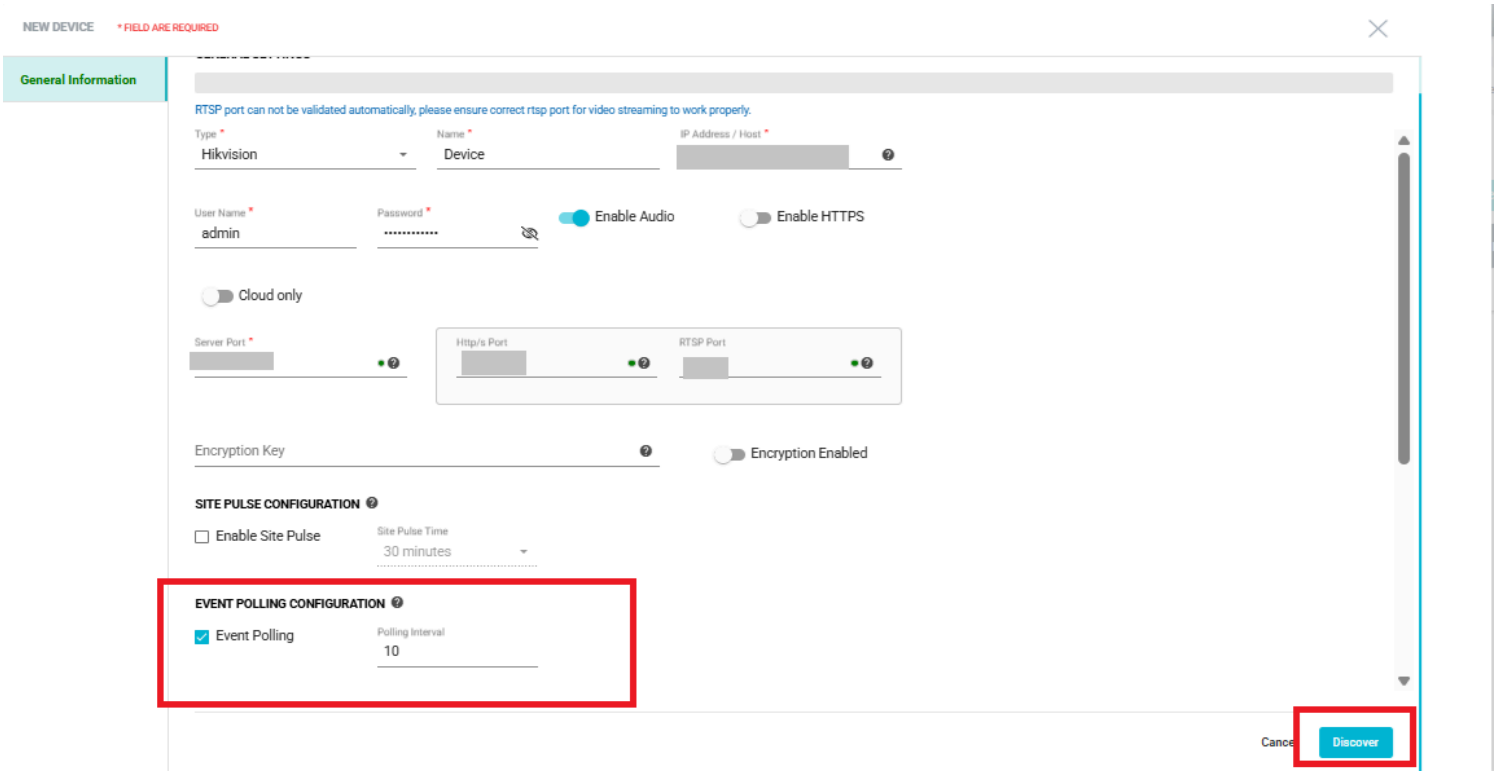


Step 6: Enter all the mandatory fields with valid data

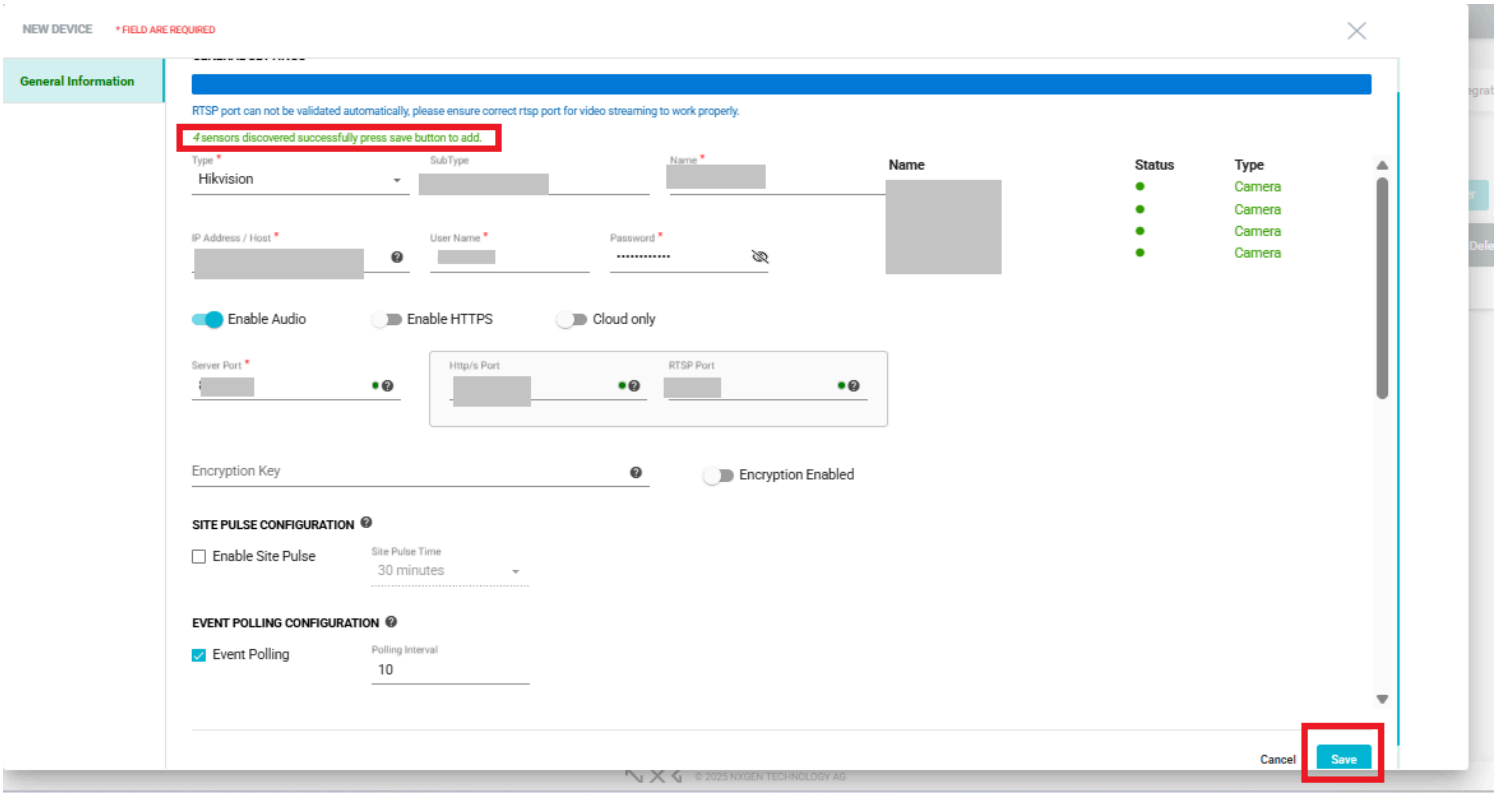
Note:

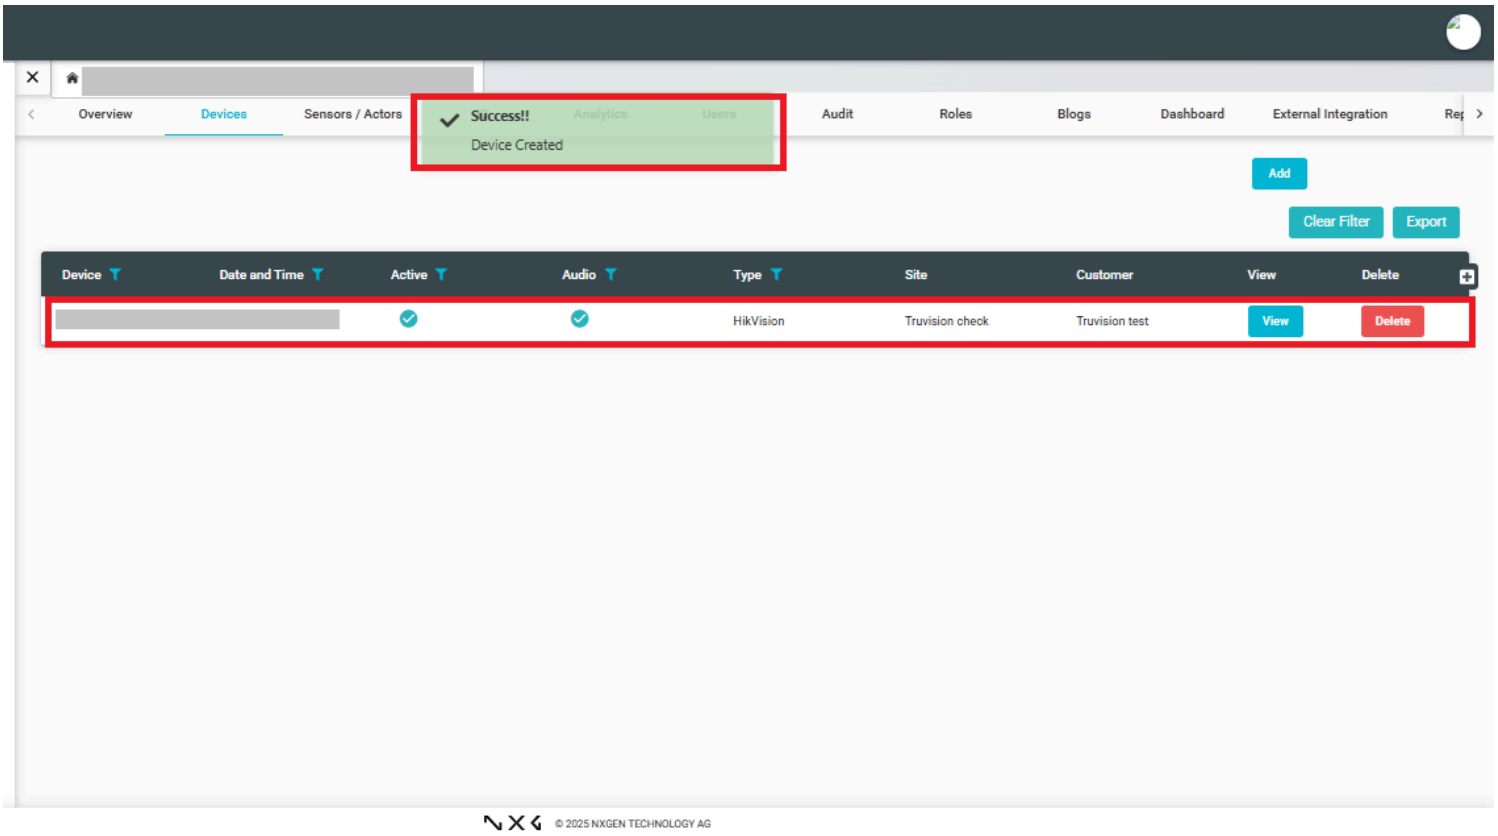
Ensure to enable the "Event polling" checkbox for alarm reception

Step 7: Click on "Discover" button



Step 8: Once discovered successfully, click on the "Save" button





Step 9: A success pop up "Device created" should be displayed and reflected in the data table
