REST API Reference

The NXGEN REST API provides comprehensive access to all platform features. All endpoints use standard HTTP methods and return JSON responses.

Base URL

Available Endpoints

The API is organized into resource categories: Authentication (/auth), Stations (/stations), Devices (/devices), Alerts (/alerts), Users (/users), Organizations (/organizations), Integrations (/integrations), Data (/data), and Webhooks (/webhooks).

Request/Response Format

All requests and responses use JSON format. Include Content-Type: application/json for POST/PUT requests.

Success Response

Error Response

HTTP Status Codes

Standard HTTP status codes: 200 OK, 201 Created, 204 No Content, 400 Bad Request, 401 Unauthorized, 403 Forbidden, 404 Not Found, 409 Conflict, 422 Unprocessable, 429 Rate Limited, 500 Server Error, 503 Unavailable.

Pagination

List endpoints support pagination using page and limit query parameters. Responses include pagination metadata with total count and navigation flags.

Filtering & Sorting

Most list endpoints support filtering and sorting via query parameters. Use status, type, search, sort, and order parameters.
