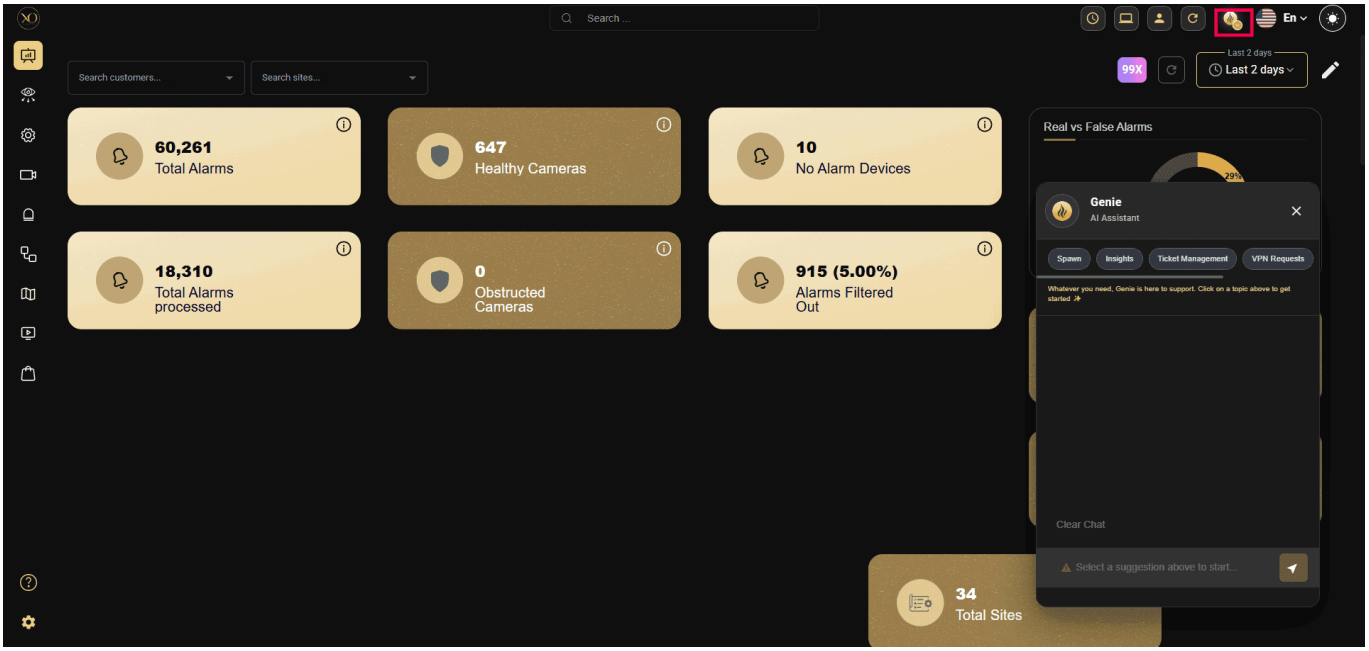
Genie AI Assistant

Genie AI Assistant



Genie AI Assistant is an intelligent assistant that helps users interact with the platform more efficiently. It provides quick access to system insights and helps users retrieve information across the platform.

How It Works

Genie AI Assistant processes user queries and retrieves relevant operational data from the platform. The assistant analyzes system information and presents insights that help users quickly access important information.

Genie Interface

The Genie interface allows users to enter queries and receive relevant information related to system activity, events, and operational data.

Assistant Capabilities

Genie AI Assistant can help users:

- Retrieve system information quickly
- Access insights about alarms and events
- Navigate platform data more efficiently
- Support operational decision-making

These capabilities help simplify interactions with the platform and improve operational awareness.

Operational Value

Genie AI Assistant enhances the user experience by providing a faster and more intuitive way to access information within the platform.
