Platform Feature List

Platform Feature List

GCXONE is a unified SaaS ecosystem that bridges video surveillance, AI analytics, and IoT telemetry. This page serves as a high-density reference for all available platform capabilities.

Video Management

- **P2P Streaming** — Direct peer-to-peer connection for ultra-low latency. Supported by: Dahua, Hikvision
- **GreenStream** — Adaptive resolution switching based on viewport size. Supported by: All Manufacturers
- **GPU Dewarping** — Client-side correction for 360° fisheye lenses. Supported by: Multi-vendor
- **Time-Lapse** — Generate condensed video summaries of historical data. Supported by: Any Cloud Site
- **PTZ Controls** — Pan, Tilt, Zoom, and Point-to-Center optical controls. Supported by: Milestone, Dahua, Hikvision

AI & Alarm Processing

- **Human Detection** — Filters alarms to only notify when people are present. Result: Up to 80% false alarm reduction
- **SLA Enforcement** — Guaranteed 60–90 second handling window for priority alerts
- **Event Metadata** — Bounding boxes and labels on people and vehicles for AI-enriched alarm review
- **Redundancy Timer** — Prevents alarm floods by ignoring duplicate events. Default: 30 seconds
- **Event Overflow Protection** — Protects the system from unstable or noisy sensors. Duration: 5 minutes auto-suspension

System Health Monitoring

- **Periodic Image Check** — Checks for a valid camera image every 12 hours. Ideal for low-risk storage and internal views
- **Configurable Heartbeat** — Proactive heartbeat checks configurable between 15 minutes and 8 hours
- **Network Drop Reporting** — Proactive reporting of network drops and camera downtime
- **AI Obstruction Detection** — Uses proprietary AI to detect blurry or out-of-focus lenses, spider webs or debris on camera glass, and angle deviations caused by tampering or wind movement

Communication & I/O

- **Genesis Audio (SIP)** — Two-way communication via IP speakers using Twilio integration
- **Digital I/O** — Real-time relay control for opening gates, barriers, or firing sirens
- **Custom SIP URLs** — Highly specific audio endpoints for legacy SIP hardware
- **ARM/DISARM Control** — Software-level scheduling to override physical device behavior

IoT & Energy Telemetry

- **Victron Integration** — Real-time monitoring of solar yield, battery voltage, and charger states
- **Teltonika Fleet** — GPS tracking and network health monitoring for mobile security towers

- **Reconeyez Synergy** — Battery level and LTE signal strength reporting for remote intrusion panels

Reporting & Accountability

- **Audit Trails** — Immutable logs of every user action and configuration change
- **Workflow Analytics** — Reports on how operators handled specific incident types
- **Custom Report Builder** — Schedule weekly PDF or CSV deliveries of alarm volumes and site uptimes
