First-Time Login & Access

First-Time Login & Access

Before beginning, ensure that all Pre-Deployment Requirements have been completed. Each step in this guide must be completed in sequence to successfully activate and access the platform.

Phase 1: Account Registration & Activation

Step 1: Access the Registration Portal

Navigate to the GCXONE Portal using a supported web browser (Chrome, Edge, or Firefox).

Upon accessing the portal you will see:

- A professional login interface
- A **Register** button for new users

Select **Register** to begin the onboarding process.

Step 2: Complete the Sign-Up Process

The onboarding follows a guided three-stage wizard:

Stage 1: Personal Information

Enter the following details:

- **First Name**
- **Last Name**
- **Email** — valid business email address

Select **Continue** to proceed.

Stage 2: Setup Cameras

Configure your tenant environment and select a deployment type.

Tenant Configuration:

- **Tenant Name** — enter the official name for the tenant environment
- **Logo** (Optional) — upload a company logo for branding

Camera Selection — choose the option that fits your environment:

- **Demo Camera** — instant platform access, full feature availability, no hardware required
- **Existing Camera** — compatible with most IP cameras, guided setup wizard, technical support available

Select **Continue** to proceed.

Stage 3: Finishing Up

Review your setup and select **Register** to finalize registration.

What happens next:

- **Account Activation** — check your email for activation instructions
- **Platform Access** — access the dashboard after activation is completed

Phase 2: Account Verification & Password Setup

Step 3: Email Verification

After registration, a verification email is sent from support@nxgen.io

Open the email and select **Confirm my account** to activate your account.

- Email confirmation must be completed before accessing the platform
- Ensure emails from nxgen.io are not blocked by spam filters

If the verification email is not received:

- Check spam or junk folders
- Add nxgen.io to your email whitelist
- Verify that corporate firewall policies are not blocking automated emails
- Contact your IT department if filtering is suspected

Step 4: Password Creation

After confirming your account, you will be redirected to the password setup page hosted by **Auth0**.

Password Requirements:

- Minimum 8 characters
- At least 3 of the following:
  - Lowercase letters (a–z)
  - Uppercase letters (A–Z)
  - Numbers (0–9)
  - Special characters (e.g., !@#$%^&*)

Best Practices:

- Use a passphrase combining multiple words
- Avoid predictable patterns

- Do not reuse passwords across systems
- Change your password immediately if compromise is suspected

Re-enter the password to confirm and select **Reset password**.

Step 5: Initial Login

Return to the GCXONE portal and sign in using your newly created credentials.

After successful login, you are redirected to the **GCXONE Dashboard** — the central operational interface of the platform.

The dashboard includes:

- **Left navigation menu** — access to core modules (Dashboard, Settings, Devices, Monitoring, Reports)
- **Global search bar** — quick navigation across the platform
- **Top-right controls** — language selection, notifications, and account options
- **Dashboard widgets** — system statistics, analytics, and operational insights
- **Real-time status indicators** — live system health and device performance
