Organization & Hierarchy Setup

Organization & Hierarchy Setup

Before beginning, ensure that First-Time Login & Access has been completed. Proper configuration ensures structured access control, operational segmentation, and scalable management across the platform hierarchy.

Phase 1: Organization Configuration

Step 1: Organization Configuration

Access the organization settings to establish the company structure and operational parameters.

Company Details:

- Legal name, address, tax information, and registration numbers
- Billing contacts, payment methods, and invoice preferences
- Preferred support channels and escalation procedures
- Industry-specific compliance and regulatory settings
- Company logo, colors, and custom branding for user interfaces

Organization Structure Considerations:

- **Business Units** — define divisions if applicable
- **Cost Centers** — set up cost centers for billing allocation
- **Multi-Tenant Settings** — configure parameters for managed service providers
- **Data Retention Policies** — establish retention and backup procedures

Step 2: Create Your First Customer

Create the primary customer entity within the platform hierarchy.

Required Information:

- **Customer Name** — official business entity name
- **Contact Details** — primary and secondary contacts including emergency numbers
- **Service Level** — Standard, Premium, or Enterprise
- **Time Zone** — local operating time zone
- **Industry Classification** — category for specialized features and compliance
- **Contract Details** — service agreement references and SLA information

Best Practices:

- Use consistent naming standards across all customer records
- Include emergency contact information for critical scenarios
- Assign the appropriate service level based on operational requirements
- Consider geographic distribution for efficient support routing

Step 3: Site Establishment

Create the first physical monitoring location within the customer hierarchy.

Required Information:

- **Site Name** — descriptive location identifier
- **Physical Address** — complete street address with postal code
- **Geographic Coordinates** — GPS coordinates for mapping and analytics
- **Operating Hours** — business hours and holiday schedules
- **Site Type** — campus, warehouse, retail, office, or specialized facility
- **Security Level** — normal, high-security, or critical infrastructure

Considerations:

- Include detailed address information for emergency services
- Set operating hours to support automated scheduling workflows
- Consider geographic location for environmental and weather-related monitoring
- Plan for scalability when defining site naming structures
