Pre-Deployment Requirements

Pre-Deployment Requirements

Before beginning the GCXONE setup process, ensure that all required network, system, account, and hardware conditions are properly prepared. Completing these prerequisites ensures a smooth registration and deployment experience.

Network Requirements

- **Internet Connection** — stable broadband connection with a minimum speed of 10 Mbps
- **IP Whitelisting** — ensure administrative access is available to configure firewall rules
- **Port Availability** — ports 80, 443, 554, and 123 must be open on the firewall
- **DNS Resolution** — confirm the network can resolve and access the nxgen.cloud domain

System Requirements

- **Operating System** — Windows 10/11, macOS 10.15+, or Linux (Ubuntu 18.04+)
- **RAM** — minimum 8 GB (16 GB recommended)
- **Storage** — at least 50 GB of available disk space
- **Display** — minimum resolution of 1920×1080

Account Requirements

- **Business Email** — valid corporate email address for registration
- **Administrative Access** — permission to configure network and security systems
- **Contact Information** — primary and secondary contact details for account recovery

Hardware Preparation

- **Workstation** — modern web browser (Chrome, Edge, or Firefox) with JavaScript enabled
- **Device Credentials** — administrator credentials for all security devices
- **Documentation** — IP addresses, port numbers, and login credentials for all equipment
- **Network Information** — subnet details and gateway addresses for device discovery
