Inviting Users

Inviting Users
Onboarding new team members is handled through an automated email workflow. This ensures that every user securely verifies their identity and sets their own private credentials.

Step 1: Navigate to Users

1. Open Settings
2. Click on Users
3. Click Invite New User to start adding a new user

Step 2: Enter User Information

Fill in the required fields:

Personal Information:

- First Name
- Last Name
- Email Address (required — serves as login ID and must be unique)
- Phone Number (optional — for SMS alerts)

Address Information (optional):

- Street Name
- Building Number
- Zip Code
- City
- Country

Step 3: Configure Account Settings

Role Assignment: Select the role that defines what this user can access, such as End User, Admin, or Operator. Each role determines which features and actions the user can access.

Session Timeout: Set the session timeout period. Default is 30 minutes. Range is 30 to 1440 minutes (0.5 to 24 hours).

Step 4: Send Invitation

Click Submit. The user will receive two automated emails:

1. Email Confirmation: Verifies the email is active.
2. Password Setup Link: Allows the user to create their secure password.

What Happens Next?

Once you click Submit, the account setup process works as follows:

1. The user receives an email titled "Changing your password for the NXGEN application."
2. They click the password reset link in the email.
3. They create a new password for their account.
4. Upon first login, they are directed to the appropriate section based on their role. If Dashboard is enabled in their role, they land on the Dashboard. If Dashboard is not enabled, they land on the first accessible section such as Configuration.

Multi-Organization Access

Users invited to multiple tenants use the same email address.

Single Identity: They only need one password.

Tenant Selection: Upon login, they will be prompted to choose which organization they want to access for that session.

Switching: They can switch between tenants anytime via Settings → Switch Tenant.

Troubleshooting

Password Setup Link Expired: For security, the password setup link expires after 24 hours. If a user misses this window, you must Resend Invitation from the Users table.

Email Not Received: Ask the user to check their Spam or Junk folder for mail from @nxgen.cloud.

Login Issues: Ensure the user clicked the Verification Link in the first email before attempting to use the password setup link.
