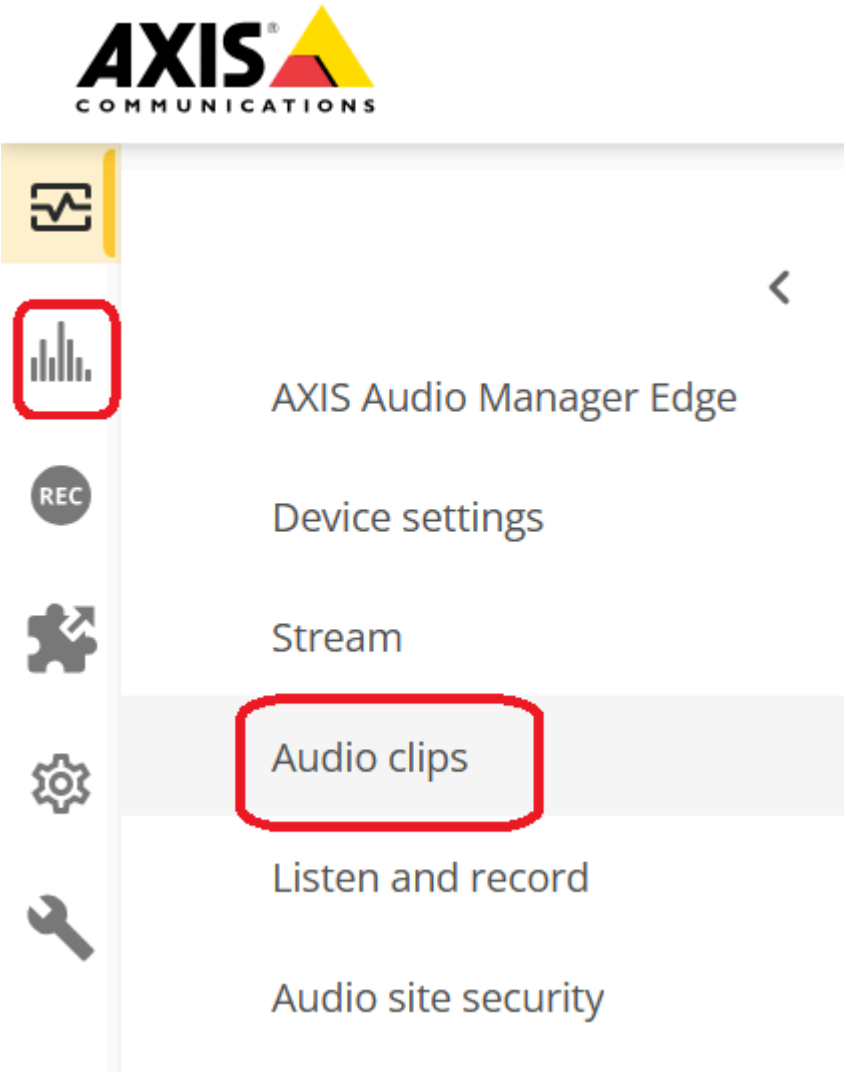
Axis Speaker - Automatic audio announcement (recorded Audio) from Workflow

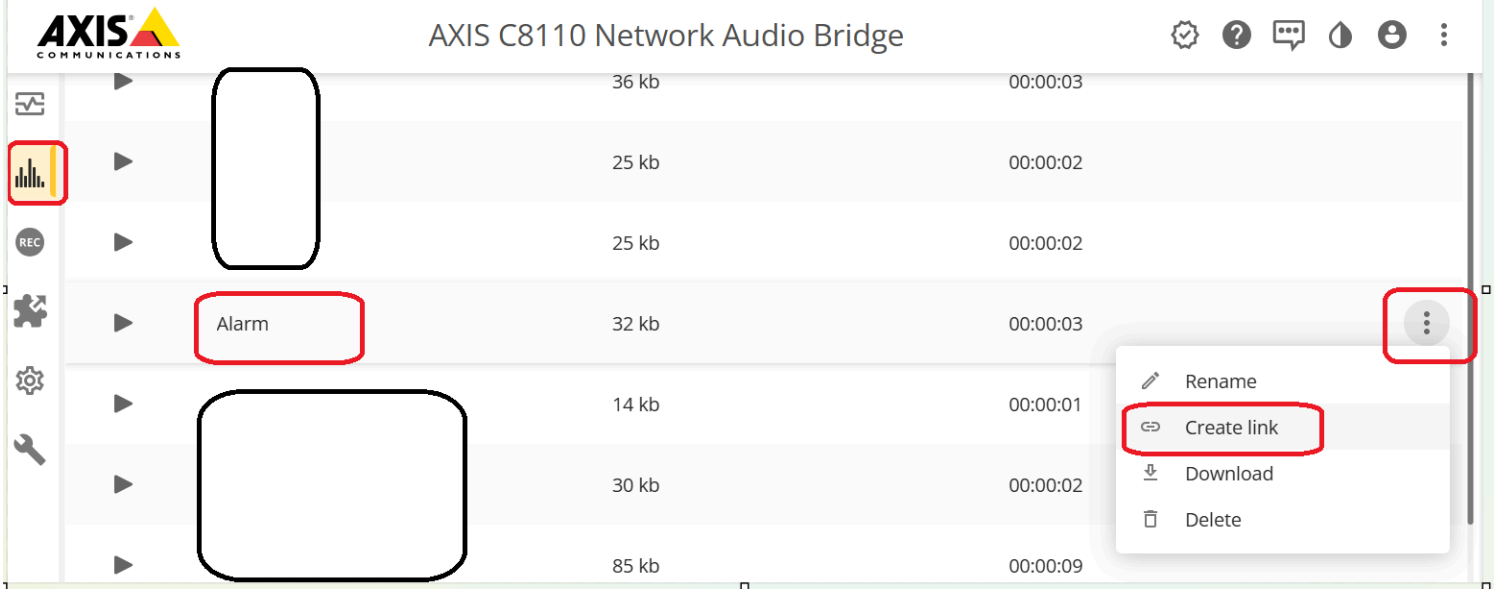
Scenario: Trigger Audio Play (recorded Audio) from Talos Workflow

Pre-requisites:

a. The audio audio clips are pre-recoded in the Speaker and is available in the Audio Clips section on the Audio bridge (step 2.4 below)

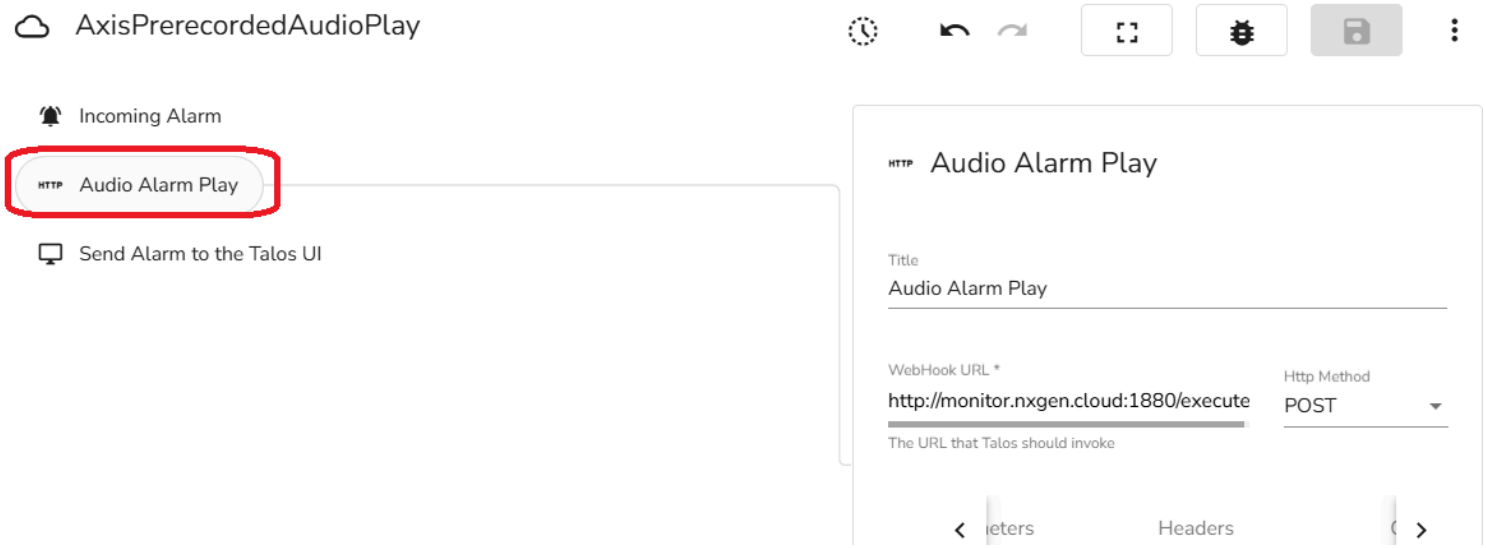


b. Ensure that a Link is created for the recording that has to be triggered - this is the URL that is used in the HTTP call made from the WF

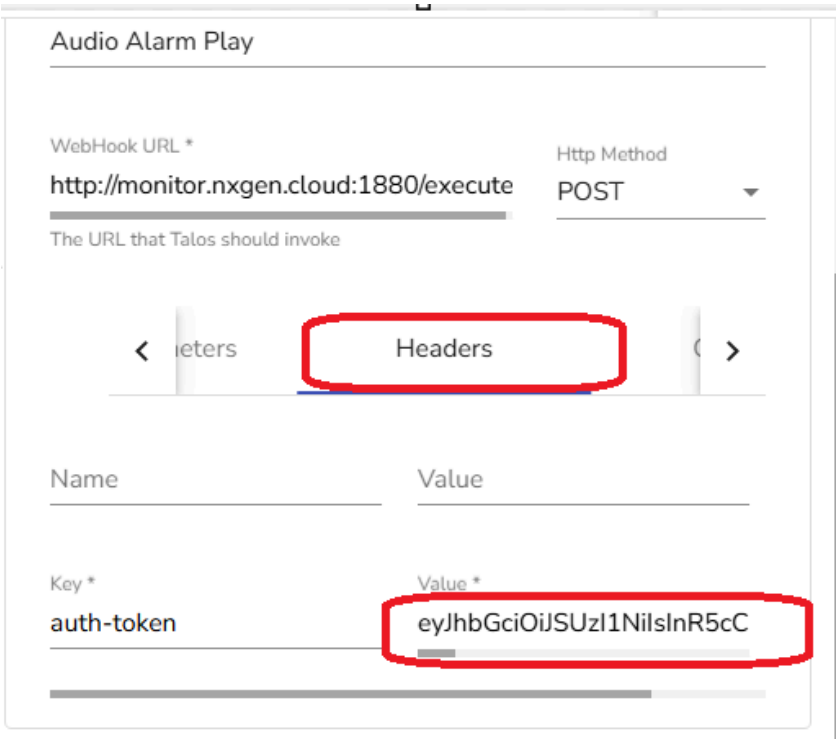


1. Load the attached WF to the site where the audio has to play
   1.b. Update the Wofkflow trigger conditions if applicable. (Nxgen team should be able to help you with this)

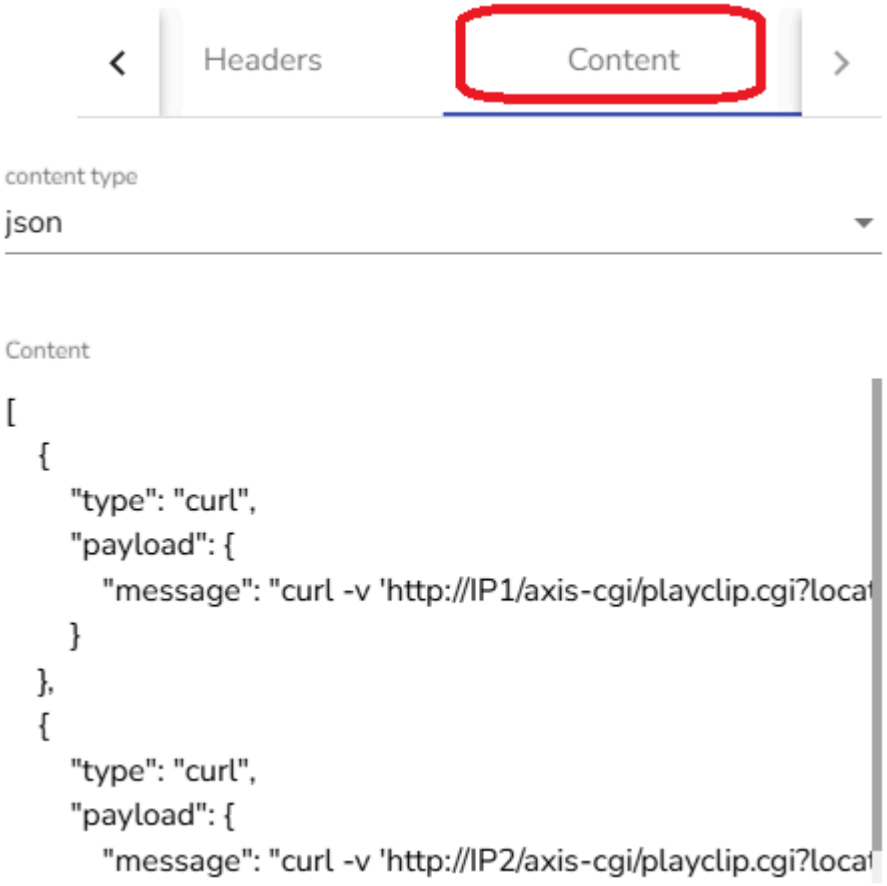
2. Configure the following parameters in the Workflow
   2.1. Navigate to the HTTP Node



2.2. Go to the Headers Tab - Update the auth-token to the tenant specific Auth token (! This step should be performed by Nxgen Team)



2.3. Modify the parameters in the Content Tab



2.4. The following is the call that will be set up assuming that we play recorded audio on two devices. Repeat the set up if you need more speakers to announce at the same time.

```
[
  {
    "type": "curl",
    "payload": {
      "message": "curl -v 'http://IP1/axis-cgi/playclip.cgi?location=alarm.mp3&repeat=0&volume=100&audiodeviceid=0&audiooutputid=0' --digest --user 'UserName:Pwd'"
    }
  },
  {
    "type": "curl",
    "payload": {
      "message": "curl -v 'http://IP2/axis-cgi/playclip.cgi?location=alarm.mp3&repeat=0&volume=100&audiodeviceid=0&audiooutputid=0' --digest -u 'UserName:Pwd'"
    }
  }
]
```
